ABOUT ME

Problem-solving adventurer seeking a challenging role as a Web Developer to apply and expand my skills, while growing within the position.

Key Skills: HTML | CSS | Javascript | Python | Django | React | Flask | jQuery | MySQL | MongoDB | PostgreSQL | Git & Github | Figma | SEO

EDUCATION

Full Stack Software Development (E-Commerce)

CODE INSTITUTE, DEC 2022 - APRIL 2024

My education was structured to emphasize practical application. Each subject culminated in a project that applied what we had learned. In total, I completed five projects.

We were not permitted to make changes to any project until receiving the final grade, which is why the projects listed below may still require some refinement.

- HTML & CSS - [View Project](#)
 - For this project I chose to upgrade an existing website. You can view the original website [here](#). The upgraded site uses the real website's booking system and retains its authentic information. I added descriptions to various sections that were previously missing.
- Javascript - [View Project](#)
 - For this project, I created a memory game. The main challenge was to ensure that the first card would revert immediately if the second card didn't match, while keeping the second card active so the user could continue playing.
- Python - [View Project](#)
 - For this project, I created a text-based zombie survival game using Python. The game mechanics include decision-making and resource management, leading to different endings based on the player's choices. The view model was provided by the Code Institute.
- Django - [View Project](#)
 - For this project, the main goal was to demonstrate CRUD functionality using Django, applied to a real-world website. I chose to create a restaurant website with a booking system, allowing users to create, read, update, and delete their bookings.
- E-Commerce - [View Project](#)
 - For this project, we were tasked with creating a fully functional e-commerce website using all the skills we had learned. I developed an online game store where users can buy PlayStation, Xbox, and Nintendo products. The site includes features for filtering games, accessories, and consoles, as well as viewing purchase history. I implemented Stripe for the payment system, utilizing their dummy cards and practice API for testing.

Front End Development

KYH, AUG 2020 - JUNI 2022

The education was designed to mimic real-world projects.

The teacher introduced theoretical concepts, followed by group work using Agile methodology. Each week, we rotated the role of scrum master and had meetings with our teacher, who acted as the project owner.

There was a strong emphasis on group collaboration and simulating real-life project environments. We primarily used React and Node.js.

- React & Firebase - [View Group Project](#)
 - This is one of our more advanced group projects, developed during the pandemic to track COVID-19 in different regions of the world. The application displays the impact of COVID-19 in a specific region using graphs, and users can save the results to their accounts for future reference.

Experience

SENIOR SALES CONSULTANT/ PART-TIME EMPLOYEE

The Change Group International Plc, Sept 2016 - Current

As a Senior Sales Consultant, I provided exceptional customer service, managed transactions, and contributed to the overall success of the business. Now serving in a part-time role, I continue to bring my expertise to the team, supporting operations as needed and ensuring high-quality service delivery.

INTERNSHIP

Solidify, Nov 2021 - Apr 2022

In my internship with Solidify, I played a role in improving their official website, which was built using **React**, **Node.js**, **TypeScript**, and **Tailwind CSS**. I worked with a headless CMS to fetch and manage the website content, effectively performing a range of tasks from debugging existing features to developing new interactive elements. I consistently adhered to design specifications to maintain a cohesive and intuitive user experience.

SUBSTITUTE SALES MANAGER

The Change Group International Plc, Jan 2019 - Feb 2020

As a Substitute Sales Manager overseeing four stores and a team of 21 employees, my multifaceted role spanned recruitment, schedule management, staff training, and adherence to Anti-Money Laundering (AML) regulations. I was committed to maintaining high company standards, managing customer and internal complaints, and upholding a strong service ethic across all locations.

As a mentor, I coached staff members on conducting transactions involving foreign currency sales, bill payments, and money transfers outside of Sweden, and provided support for complex transactions. I also performed regular audits on transaction records and cancellation procedures to ensure accuracy and identify areas for improvement.

In addition to my operational responsibilities, I played a role in marketing initiatives, salary negotiations, and maintained the integrity of essential paperwork. I ensured the successful execution of the company's training program, focusing on ethical selling practices and regulatory compliance. My method included active listening during sales conversations, providing constructive feedback, and ensuring all team members fully understood and applied their training.
